PROFESSIONAL EXPERIENCE

Raycap
Mechanical Engineer I

North Charleston, SC
2024 - Present

- Design custom cellular infrastructure products from customer and site requirements through detailed 3D assemblies, fabrication drawings, bills of materials, and installation documentation.
- Develop parametric designs in Autodesk Inventor with a focus on manufacturability, assembly, installation access, tolerances, and efficient reuse of proven designs.
- Design fabricated A36 steel and composite assemblies for in-house cutting, forming, welding, and finishing, incorporating shop capabilities and downstream galvanizing into design decisions.
- Resolve manufacturing and field fit-up issues and develop preliminary structural concepts in coordination with structural engineers for analysis and approval.

Electrolux
Research and Development Co-op

Anderson, SC
Jan 2022 - Aug 2023

- Managed four cost-saving projects generating more than \$545,000 in annual savings.
- Managed, documented, and presented results from 30+ concurrent quality tests for a new refrigerator model and led manufacturing trials to qualify new parts for production.
- Initiated refrigerator noise-reduction trials, updated CAD models and drawings for product development, and performed tolerance stacks to identify potential quality issues.
- Analyzed service-call data to identify and prioritize components responsible for recurring field issues.

EDUCATION

Clemson University
Bachelor of Science in Mechanical Engineering

Clemson, SC
May 2024

TECHNICAL SKILLS

CAD & Design: Autodesk Inventor, AutoCAD, SolidWorks; parametric modeling, tolerance analysis, design for manufacturing and assembly

Manufacturing: Fabricated steel and sheet metal, welding, galvanizing, composites, CNC/laser cutting, 3D printing

Engineering: BOMs, fabrication and installation drawings, engineering change management, product development, FEA

Automation & Data: Inventor iLogic, design templates, reusable CAD workflows, Microsoft Excel
